

# The `bookmark` package

Heiko Oberdiek\*

2023-12-10 v1.31

## Abstract

This package implements a new bookmark (outline) organization for package `hyperref`. Bookmark properties such as style and color can now be set. Other action types are available (URI, GoToR, Named). The bookmarks are generated in the first compile run. Package `hyperref` uses two runs.

# 1 Documentation

## 1.1 Introduction

This package `bookmark` tries to provide a more modern management for bookmarks:

- The bookmarks are already generated in the first `TeX` compile run.
- The font style and color of the bookmarks can be changed.
- More actions than simple GoTo actions are possible.

In the same way as `hyperref` [1] the bookmarks are generated in the order of the bookmark generating macros (`\bookmark`). A level number is used to define the tree structure of the bookmarks. The restrictions are less strict:

- The level values may jump and omit values. A `\subsubsection` may follow a `\chapter`. This was an error in `hyperref`, that prints a warning and tries to fix this.
- Several bookmarks may point to the same destination. In `hyperref` this would mess up the bookmark tree completely, because the algorithm assumes that the destination names are keys (unique).

Note that this package is intended as experimentation platform for bookmark management. Feedback is welcome. Also the interfaces may change in future versions.

## 1.2 Options

Options can be given at four places:

1. `\usepackage[<options>]{bookmark}`  
This is the only place for driver options and option `atend`.
2. `\bookmarksetup{<options>}`  
This command is just for setting options.
3. `\bookmarksetupnext{<options>}`  
The options are stored and called after the options of the next `\bookmark` command.
4. `\bookmark[<options>]{<title>}`  
This command sets the bookmark. The option settings remain limited to this bookmark.

Exception: Driver options, option `atend` and options `draft/final` cannot be changed after the package is loaded.

### 1.2.1 Options `draft` and `final`

If a `LATeX` file is compiled several times, then a little time can be saved, if option `draft` is used to disable the bookmark stuff of this package. Default is `final`. Both options are boolean options, without value the value `true` is used. `draft=true` is the same as `final=false`.

Options of package `bookmark` are local options with the exception of driver options. Therefore `draft` or `final` given as class option is not seen by this package. If you want to optimize first `LATeX` runs depending on a global `draft`, then package `ifdraft` and `LATeX`'s `\PassOptionsToPackage` might help in the organization of the preamble, for example:

```
\documentclass[draft]{article}
\usepackage{ifdraft}
\ifdraft{%
  \PassOptionsToPackage{draft}{bookmark}%
}{}
```

### 1.2.2 Driver options

Supported drivers are pdftex, dvips, dvipdfmx (xetex and older name dvipdfm), and vtex. The TEX engines pdfTEX, XFTEX, and VTEX are automatically detected. The default for the DVI drivers is dvips. This can be changed in the configuration file `bookmark.cfg` by `\BookmarkDriverDefault`, e.g.:

```
\def\BookmarkDriverDefault{dvipdfm}
```

The current versions of the drivers uses new LATEX-hooks and tests if the PDF management is active and so requires a format newer than 2022-06-01.

**Open bookmarks with dvipdfmx.** Older version of the package had an option `dvipdfmx-outline-open` to activate code which allows to specify the open status of an outline entry. The package now assumes that all used dvipdfmx version are current enough to understand this code and so activates the code always. The option itself will be ignored.

### 1.2.3 Layout options

**Font options.**

**bold:** The bookmark is shown with a bold font if the PDF viewer supports this (since PDF 1.4).

**italic:** An italic font is used (since PDF 1.4).

Both `bold` and `italic` can be used together. Using value `false` disables the font option.

**Color option.** Colored bookmarks are a feature of PDF 1.4, they are not supported by all PDF viewers.

**color:** Here the color can be given as color specification of packages `color` or `xcolor`. An empty value means that the color property is not set. Without package `xcolor` the recognized values are restricted to

- Empty value, no color is set,  
example: `color={}`
- Explicit color specification of color model rgb,  
example for red: `color=[rgb]{1,0,0}`
- Explicit color specification of color model gray,  
example for dark gray: `color=[gray]{0.25}`

Note that this restriction also holds if package `color` is loaded. With `xcolor`, however, the full range of color specifications can be used.

### 1.2.4 Action options

**dest:** Destination name.

**page:** Page number, first page is 1.

**view:** View specification, examples:

```
view={FitB}, view={FitH 842}, view={XYZ 0 100 null} Some view specification parameters expect numbers as parameters with unit bp. They can be given either as plain numbers or as length expressions inside \calc. Expressions of package calc are supported if the package is loaded. Otherwise ε-TEX's \dimexpr is used. Example:
```

```
view={FitH \calc{\paperheight-\topmargin-1in}}
view={XYZ 0 \calc{\paperheight} null}
```

Note that \calc cannot be used for the third parameter of XYZ. This parameter is the zoom value, not a length.

**named:** Named action name:

```
FirstPage, LastPage, NextPage, PrevPage
```

**gotor:** Name of the external PDF file.

**uri:** URI specification.

**rawaction:** Raw action specification. Because these specification depends on the driver this option should not be used.

The appropriate action for the bookmark is selected by analyzing the specified options. The actions are distinguished by different sets of options:

Action	Options
GoTo:	dest
GoTo:	page + view
GoToR:	gotor + dest
GoToR:	gotor + page + view
Named:	named
URI:	uri

**Missing actions.** If the action is missing package bookmark throws an error message. Depending on the driver (pdftex, dvips and friends) the package detects it quite late at the end of the document. Since version 2011/04/21 v1.21 the package tries printing the line number and file name of the corresponding occurrence of \bookmark. However, TeX does provide the line number, but unhappily the file name is a secret. The package supports some ways to get the file name:

- If LuaTeX (independently from DVI or PDF modes) is running, then its `status.filename` is used automatically.
- Package `\currfile` [2] redefines LATEX internals to keep track of the file name. If the package is loaded, then its `\currfilepath` is detected and used automatically by package `bookmark`.
- The file name can be set manually by option `scrfile` in `\bookmarksetup` or `\bookmark`. But be careful, manual setting disables the previous ways for file name detection. And a wrong or missed file name setting might get you a wrong source location in the error message.

### 1.2.5 Level options

The order of the bookmark entries are defined by the appearance order of \bookmark commands. The tree structure is constructed by the property `level` of the bookmark nodes. The values of `level` are integers. If the level of a bookmark entry has a higher value than the previous node, then the entry becomes a child of the previous node. The absolute value of the difference does not matter.

Package `bookmark` remembers the level of the previous bookmark entry in a global property ‘current level’.

The behaviour of the level system can be configured by following options:

**level:** Sets the level, see the description above. If option `level` is given without value, then the default behaviour is restored, that the ‘current level’ is used as level value. Since version 2010/10/19 v1.16 package `bookmark` also supports names `part`, `section` and other, if the macros `\toclevel@part`, `\toclevel@section` are defined (done by package `hyperref`, see option `bookmarkdepth`).

**rellevel:** Sets the level relative to the previous level. A positive value means that the bookmark entry become a child of the previous one.

**keeplevel:** Use the level, set by `level` or `rellevel`, but do not change the global property ‘current level’. The option can be disabled by setting to `false`.

**startatroot:** At this time the bookmark tree starts at the top level again. The next bookmark entry is not sorted as child to a previous entry. Example scenario: A document uses `part`. However there are last chapters that should not be put below the last part:

```
\documentclass{book}
[...]
\begin{document}
  \part{First part}
    \chapter{First chapter in first part}
    [...]
  \part{Second part}
    \chapter{First chapter in second part}
    [...]
  \bookmarksetup{startatroot}
  \chapter{Index}% does not belong to second part
\end{document}
```

### 1.2.6 Style definitions

A style is a group of option settings. It can be defined by macro `\bookmarkdefinestyle` and is used by option `style`.

```
\bookmarkdefinestyle {\langle name \rangle} {\langle key value list \rangle}
```

The `\langle key value list \rangle` of option settings is assigned the style `\langle name \rangle`.

**style:** The value of option `style` is the name of a previously defined style. Its option settings are now executed. The options may include option `style`. Endless recursion by calling the same style recursively is prevented and throws an error.

### 1.2.7 Hook support

A hook is called right after the processing the optional options of macro `\bookmark`.

**addtohook:** Code, given as value to this option is added to the hook.

```
\bookmarkget {\langle option \rangle}
```

Macro `\bookmarkget` extracts the value of the latest option setting of option `\langle option \rangle`. In case of boolean options number one is returned, if the boolean option is enabled, otherwise the result is zero. The resulting numbers can directly be used in `\ifnum` or `\ifcase`. If you want to have the digits 0 and 1, then prefix `\bookmarkget` with `\number`. Macro `\bookmarkget` is expandable. In case of unsupported options an empty string is returned. Supported boolean options are

**bold, italic, open**

Other supported options:

depth, dest, color, goto, level, named, openlevel, page, rawaction, uri, view,

Additionally the following key is available:

**text**

It returns the text of the outline entry.

**Option setting.** Inside the hook an option can be set using `\bookmarksetup`.

### 1.3 Compatibility with `hyperref`

Package `bookmark` automatically disables `hyperref`'s bookmarks. However the package uses some of the code of `hyperref`. For example, the package redefines the hook `\Hy@writebookmark` that `hyperref` inserts in `\addcontentsline` and other commands. Therefore `hyperref`'s bookmarks should not be disabled.

Package `bookmark` uses `hyperref`'s `\pdfstringdef` and does not provide a replacement.

Some options of `hyperref` are also implemented in package `bookmark`:

<code>hyperref</code>	<code>bookmark</code>
<code>bookmarksdepth</code>	<code>depth</code>
<code>bookmarksopen</code>	<code>open</code>
<code>bookmarksopenlevel</code>	<code>openlevel</code>
<code>bookmarksnumbered</code>	<code>numbered</code>

The following commands are also available:

```
\pdfbookmark  
\currentpdfbookmark  
\subpdfbookmark  
\belowpdfbookmark
```

### 1.4 Adding bookmarks at the end

Package option `atend` enables the following macro:

```
\BookmarkAtEnd {\langle stuff \rangle}
```

Macro `\BookmarkAtEnd` puts `\langle stuff \rangle` at the end of the document. `\langle stuff \rangle` means bookmark commands. Example:

```
\usepackage [atend]{bookmark}  
\BookmarkAtEnd{  
    \bookmarksetup{startatroot}%  
    \bookmark[named=LastPage, level=0]{Last page}%  
}
```

Alternatively, option `startatroot` can be given in `\bookmark`:

```
\BookmarkAtEnd{  
    \bookmark[  
        startatroot,  
        named=LastPage,  
        level=0,  
    ]{Last page}%  
}
```

## Remarks.

- `\BookmarkAtEnd` hides the fact that the method for adding bookmarks at the end of the document depends on the driver.

The driver `pdftex` use package `atveryend`'s for this purpose. `\AtEndDocument` is too early, the last page might not been shipped out. Because the `.aux` file is needed, this driver use `\AfterLastShipout`.

The implementation of the other drivers (`dvipdfm`, `xetex`, `vtx`) depends on `\special` that does not have an effect after the last page. In this case `\AtEndDvi` of package `atenddvi` helps. It puts its argument on last page of the document. Two `LATEX` runs are necessary at least, because the last page is detected by a reference.

`dvips` uses now the new `LaTeX` hook `shipout/lastpage`.

- The time of expansion of the argument of `\BookmarkAtEnd` is not specified. This can happen immediately or at the end of the document.

## 1.5 Structure destinations

If tagging is activated with e.g.

```
\DocumentMetadata{testphase=phase-III} %or some other phase a
```

the outlines will also use structure destinations, these are destination bound not to a page but to a structure. This works only with `pdftex`, `lualatex` and `xetex/dvipdfmx`.

## 1.6 Limitations/Todos

- Support for missing actions (Launch, ...).
- Better design for `hyperref`'s option `bookmarkstype`.

## 2 Example

```
1 <*example>
2 \documentclass{article}
3 \usepackage{xcolor}[2007/01/21]
4 \usepackage{hyperref}
5 \usepackage[
6   open,
7   openlevel=2,
8   atend
9 ]{bookmark}[2019/12/03]
10
11 \bookmarksetup{color=blue}
12
13 \BookmarkAtEnd{%
14   \bookmarksetup{startatroot}%
15   \bookmark[named=LastPage, level=0]{End/Last page}%
16   \bookmark[named=FirstPage, level=1]{First page}%
17 }
18
19 \begin{document}
20 \section{First section}
21 \subsection{Subsection A}
22 \begin{figure}
23   \hypertarget{fig}{}%
24   A figure.
```

```

25 \end{figure}
26 \bookmark[
27   rellevel=1,
28   keeplevel,

1621   \let\BKM@entry\BKM@D0@entry
1622 }

1623 </pdftex | pdfmark>

```

## 3.7 Option atend

### 3.7.1 Hook

```

1624 <*package>
1625 \ifBKM@atend
1626 \else
\nBookmarkAtEnd This is a dummy definition that generates a warning if option atend has not been
given.
1627   \newcommand{\BookmarkAtEnd}[1]{%
1628     \PackageWarning{bookmark}{%
1629       Ignored, because option 'atend' is missing%
1630     }%
1631   }%
1632   \expandafter\endinput
1633 \fi

\nBookmarkAtEnd
1634 \newcommand*\BookmarkAtEnd{%
1635   \g@addto@macro\BKM@EndHook
1636 }

1637 \let\BKM@EndHook\empty
1638 </package>

```

### 3.7.2 Drivers using hooks at end of document

Driver pdftex use the LaTe $\backslash$ X hook `enddocument/afterlastpage` (which is equivalent to the previously used `\AfterLastShipout` of `atveryend`'s), because it still needs the `.aux` file. It uses `\pdfoutline` for the bookmarks that can be used after the last page.

- Driver pdftex uses `\pdfoutline` that can be used after the last page.

```

1639 <*pdftex>
1640 \ifBKM@atend
1641   \AddToHook{enddocument/afterlastpage}{%
1642     \BKM@EndHook
1643   }%
1644 \fi
1645 </pdftex>

```

### 3.7.3 Drivers using `shipout/lastpage`

The other drivers implement `\bookmark` using `\special` commands. Thus the last bookmarks must be put on the last page, not afterwards. `\AtEndDocument` cannot be used, because it is too late, the last page can already be output. Therefore we use the LaTe $\backslash$ X hook `shipout/lastpage`. At least two LaTe $\backslash$ X runs are necessary. The postscript driver dvips use an external PostScript file for the bookmarks. The file writing has been moved to the the last shipout page too to avoid conflicts with pgf.

```

1646 <*dvipdfm | vtex | pdfmark>
1647 \ifBKM@atend
1648   \AddToHook{shipout/lastpage}{\BKM@EndHook}%
1649 \fi
1650 </dvipdfm | vtex | pdfmark>

```

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

---

<sup>1</sup>CTAN:[pkg/bookmark](#)

[CTAN:macros/latex/contrib/bookmark/bookmark.dtx](#) The source file.

[CTAN:macros/latex/contrib/bookmark/bookmark.ins](#) Installation driver.

[CTAN:macros/latex/contrib/bookmark/bookmark.pdf](#) Documentation.

## 4.2 Package installation

The easiest is to use the package manager from your TeX system. If you want to install manually:

**Unpacking.** The .dtx file is docstrip archive. The files are extracted from the .dtx by compiling the file with some TeX program.

```
pdflatex bookmark.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>bookmark.sty</code>	→ <code>tex/latex/bookmark/bookmark.sty</code>
<code>bkm-dvipdfm.def</code>	→ <code>tex/latex/bookmark/bkm-dvipdfm.def</code>
<code>bkm-dvips.def</code>	→ <code>tex/latex/bookmark/bkm-dvips.def</code>
<code>bkm-pdfTeX.def</code>	→ <code>tex/latex/bookmark/bkm-pdfTeX.def</code>
<code>bkm-vtex.def</code>	→ <code>tex/latex/bookmark/bkm-vtex.def</code>
<code>bkm-dvipdfm-2019-12-03.def</code>	→ <code>tex/latex/bookmark/bkm-dvipdfm-2019-12-03.def</code>
<code>bkm-dvips-2019-12-03.def</code>	→ <code>tex/latex/bookmark/bkm-dvips-2019-12-03.def</code>
<code>bkm-pdfTeX-2019-12-03.def</code>	→ <code>tex/latex/bookmark/bkm-pdfTeX-2019-12-03.def</code>
<code>bkm-vtex-2019-12-03.def</code>	→ <code>tex/latex/bookmark/bkm-vtex-2019-12-03.def</code>
<code>bookmark.pdf</code>	→ <code>doc/latex/bookmark/bookmark.pdf</code>
<code>bookmark-example.tex</code>	→ <code>doc/latex/bookmark/bookmark-example.tex</code>
<code>bookmark.dtx</code>	→ <code>source/latex/bookmark/bookmark.dtx</code>

If you have a `docstrip.cfg` that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

## 4.3 Refresh file name databases

If your TeX distribution (TeX Live, MiKTeX, ...) relies on file name databases, you must refresh these. For example, TeX Live users run `texhash` or `mktexlsr`.

**Generating the documentation.** You can use the .dtx to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfLATEX:

```
pdflatex bookmark.dtx
makeindex -s gind.ist bookmark.idx
pdflatex bookmark.dtx
makeindex -s gind.ist bookmark.idx
pdflatex bookmark.dtx
```

## 5 References

[1] Sebastian Rahtz, Heiko Oberdiek: *The hyperref package*; 2011/04/17 v6.82g; [CTAN:pkg/hyperref](#)

## 6 History

[2007/02/19 v0.1]

- First experimental version.

[2007/02/20 v0.2]

- Option `startatroot` added.
- Dummies for `\pdf(un)escape...` commands added to get the package basically work for non-pdf<sub>T</sub>E<sub>X</sub> users.

[2007/02/21 v0.3]

- Dependency from pdf<sub>T</sub>E<sub>X</sub> 1.30 removed by using package `pdfescape`.

[2007/02/22 v0.4]

- `hyperref`'s `bookmarkstype` respected.

[2007/03/02 v0.5]

- Driver options `vtx` (PDF mode), `dvispsone`, and `textures` added.
- Implementation of option `depth` completed. Division names are supported, see `hyperref`'s option `bookmarksdepth`.
- `hyperref`'s options `bookmarksopen`, `bookmarksopenlevel`, and `bookmarksdepth` respected.

[2007/03/03 v0.6]

- Option `numbered` as alias for `hyperref`'s `bookmarksnumbered`.

[2007/03/07 v0.7]

- Dependency from  $\varepsilon$ -T<sub>E</sub><sub>X</sub> removed.

[2007/04/09 v0.8]

- Option `atend` added.
- Option `rgbcolor` removed. `rgbcolor=<r> <g> <b>` can be replaced by `color=[rgb]{<r>,<g>,<b>}`.
- Support of recent cvs version (2007-03-29) of dvipdfmx that extends the `\special` for bookmarks to specify open outline entries. Option `dvipdfmx-outline-open` or `\SpecialDvipdfmxOutlineOpen` notify the package.

[2007/04/25 v0.9]

- The syntax of `\special` of dvipdfmx, if feature `dvipdfmx-outline-open` is enabled, has changed. Now cvs version 2007-04-25 is needed.

[2007/05/29 v1.0]

- Bug fix in code for second parameter of XYZ.

[2007/07/13 v1.1]

- Fix for pdfmark with GoToR action.

[2007/09/25 v1.2]

- pdfmark driver respects \nofiles.

[2008/08/08 v1.3]

- Package flags replaced by package `bitset`. Now flags are also supported without  $\varepsilon$ -TEX.
- Hook for package `hypdestopt` added.

[2008/09/13 v1.4]

- Fix for bug introduced in v1.3, package `flags` is one-based, but package `bitset` is zero-based. Thus options `bold` and `italic` are wrong in v1.3. (Daniel Müllner)

[2009/08/13 v1.5]

- Except for driver options the other options are now local options. This resolves a problem with KOMA-Script v3.00 and its option `open`.

[2009/12/06 v1.6]

- Use of package `atveryend` for drivers `pftex` and `pdfmark`.

[2009/12/07 v1.7]

- Use of package `atveryend` fixed.

[2009/12/17 v1.8]

- Support of `hyperref` 2009/12/17 v6.79v for X $\varepsilon$ TEX.

[2010/03/30 v1.9]

- Package name in an error message fixed.

[2010/04/03 v1.10]

- Option `style` and macro `\bookmarkdefinestyle` added.
- Hook support with option `addtohook` added.
- `\bookmarkget` added.

[2010/04/04 v1.11]

- Bug fix (introduced in v1.10).

[2010/04/08 v1.12]

- Requires `ltxcmds` 2010/04/08.

[2010/07/23 v1.13]

- Support for `memoir`'s `\booknumberline` added.

[2010/09/02 v1.14]

- (Local) options `draft` and `final` added.

[2010/09/25 v1.15]

- Fix for option `dvipdfmx-outline-open`.
- Option `dvipdfmx-outline-open` is set automatically, if  $\text{XeTeX} \geq 0.9995$  is detected.

[2010/10/19 v1.16]

- Option ‘`startatroot`’ now acts globally.
- Option ‘`level`’ also accepts names the same way as option ‘`depth`’.

[2010/10/25 v1.17]

- `\bookmarksetupnext` added.
- Using `\kvsetkeys` of package `kvsetkeys`, because `\setkeys` of package `keyval` is not reentrant. This can cause problems (unknown keys) with older versions of hyperref that also uses `\setkeys` (found by GL).

[2010/11/05 v1.18]

- Use of `\pdf@ifdraftmode` of package `pdftexcmds` for the default of option `draft`.

[2011/03/20 v1.19]

- Use of `\dimexpr` fixed, if  $\varepsilon\text{-}\text{\TeX}$  is not used. (Bug found by Martin Münch.)
- Fix in documentation. Also layout options work without  $\varepsilon\text{-}\text{\TeX}$ .

[2011/04/13 v1.20]

- Bug fix: `\BKM@SetDepth` renamed to `\BKM@SetDepthOrLevel`.

[2011/04/21 v1.21]

- Some support for file name and line number in error messages at end of document (pdfTeX and pdfmark based drivers).

[2011/05/13 v1.22]

- Change of version 2010/11/05 v1.18 reverted, because otherwise draftmode disables some `.aux` file entries.

[2011/09/19 v1.23]

- Some `\renewcommands` changed to `\def` to avoid trouble if the commands are not defined, because hyperref stopped early.

[2011/12/02 v1.24]

- Small optimization in `\BKM@toHexDigit`.

[2016/05/16 v1.25]

- Documentation updates.

[2016/05/17 v1.26]

- define `\pdfoutline` to allow pdftex driver to be used with LuaTeX.

[2019/06/04 v1.27]

- unknown style options are ignored (issue 67)

[2019/12/03 v1.28]

- Documentation updates.
- adjust package loading (all required packages already loaded by `hyperref`).

[2020-11-06 v1.29]

- Adapted the dvips to avoid a clash with pgf.  
<https://github.com/pgf-tikz/pgf/issues/944>
- All drivers now use the new LaTeX hooks and so require a format 2020-10-01 or newer.
- Added support for destlabel option of `hyperref`,  
<https://github.com/ho-tex/bookmark/issues/1>
- Removed the `dvipsonone` and `textures` driver.
- Removed the code for option `dvipdfmx-outline-open` and `\SpecialDvipdfmxOutlineOpen`. All dvipdfmx version should now support this out-of-the-box.

[2023-12-05 v1.30]

- Corrected support for option `bookmarkstype` of `hyperref`,  
<https://github.com/ho-tex/bookmark/issues/4>
- Added support for structure destinations,  
<https://github.com/ho-tex/bookmark/issues/7>

[2023-12-10 v1.31]

- Simplified the `.dtx`. It is no longer a self-extracting archive instead the newly added `.ins` should be used for installation.  
<https://github.com/ho-tex/bookmark/issues/7>
- Removed the now outdated frozen drivers.
- Removed the dependency to `ltxcmds`.

## 7 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
